Hidehumi Hai

On December fifth, our school had a Sport Day "Hidehumi Hai." There were five events. The first event was a three-legged race. In this game, two people's speed and combination were important. The second event was a centipede race, in Japanese "Mukade Kyousou." In this race, five people's combination decided the result of the game. The third event was tug-of-war. In this game, individual power was the most important, but a strategy was also important. The fourth event was relay. In this race, individual speed and a baton miss decided which team to win the game. The fifth event was rope skipping. In this game, stamina was very important. I thought "Eishinka" was very active on the sports day. I'm impressed by their attitude for getting a victory. Their soul was just equal to "Lion Principle."

Hobby "Swimming"

I like swimming very much. When I was a junior high school student, I used to swim 3,000 meters a day. The hard practice made me patient. I have cultivated my style of swimming so I will introduce one of them to you. It is my good style. It is difficult for everyone to swim in the style. First, you put yourself into a pool or the sea. Second, after you float on your back, you must see the tips of your toes. Third, you must raise your arm with the others on your thigh and kick your feet and let your arm enter above the water silently. You can advance by repeating this process. If you are interested in my explanation, please try to practice the style. Most people are good at swimming in the style. You will be able to play an active part, provided that you master backstroke.

Book Introducing 'An end roll of the fool'

I will introduce to you the book whose title is "An end roll of the fool." This book is a sequel to "Hyoka" which I introduce to you before. Late in August, "Kanyasai," which is a school festival of Houtaro's school, was only two months away. After Houtaro solved Chitanda's problem, Houtaro, Chitanda, Satoshi and Ibara who belong to the Koten Club watched the movie made by 2-F in Houtaro's school for the school festival because Chitanda asked them to watch the movie. But, this movie wasn't completed yet. And Irisu Fuyumi, who is a Chitanda's acquaintance and belongs to 2-F, asked them to think about the end of this movie. And they came to think about it. This movie is a mystery story and a locked-room murder case happened in this movie. They thought about the mystery of the locked-room murder and found the end of this story. Their answer is so wonderful. If you want to know their answer, please read this book.

Education

The other day, Mr. Someno gave us a handout in an English class. The content of it was about Malala Yousafzai, a human rights activist in Pakistan. Though she is only 16 years old, she is appealing for the necessity of women's education and peace. But in October, 2012, she was shot by a soldier in the Taliban. After that, she recovered miraculously and resumed the activities. It is unbelievable that a girl of my age is playing an active role in the political world. Were I in her place, I would give up the activities after the shooting. In her speech after her recovery, she said "I am the same Malala. My ambitions are the same. My hopes are the same. And my dreams are the same." After reading this speech, I am convinced once more that she is a woman of iron will. We must not forget that in the world there are a lot of people who can't be educated even though they want to study. We must appreciate our favorable environment. I was most impressed by the following words. "Let us pick up our books and our pens. They are our most powerful weapons. One book and one pen can change the world."

---R.T.

Opinion

Today, some big car companies in Japan are developing a new technology that does not need a driver to control the car. And recently the Japanese Prime Minister, Abe rode a car with the control moving automatically. But when I was watching the news, I felt extremely uneasy; the driver, who was sitting on the seat next to Mr. Abe was always ready to take the steering wheel. Although that was by way of precaution, it is fearful to ride a car that might move out of control. What do you think about the new technology? Should we expand it more and more? I do not think so. By this technology, I feel that we humans are picking up speed toward something in the wrong way, even though I cannot explain the reason well. We should not depend on all the new technologies that come one after another. But those who are favorable to these cars say that this new technology would lower the risk of traffic accidents surprisingly, and those errors of devices are much less than our carelessness. It may be true, but we must always prepare for the worst. In the past, there was such a thing. First, in 19th century, the airplane with the minister of an Islamic country was crashed by terrorists, who controlled the electromagnetic wave. Second, probably the story was exaggerated, but please note that we could do such a thing as follows. As you know, in the last two or three years, TOYOTA cars were recalled in the U.S and the incident was given a lot of coverage. But actually, there may not have been anything wrong with the cars in themselves. The incident may have been caused by those who did not like TOYOTA cars selling well and they controlled the electronic devices on the cars.

"The birth of Clinical Medicine" by M,Foucault

Last Saturday, we took the practice clinical medicine was born during a half century from the end of the eighteenth century to the beginning of the nineteenth century. There was a political realignment over medical and a reorganization of medical knowledge itself. Political; consciousness to epidemics caused the political realignment. A surveillance network was created for the prevention of epidemics and against the spread of them. This built up toward the end of the eighteenth century. Medicine expanded its territory from hospital to the whole society. Medicine was centralized as a duty of a state. Medical education was placed under the control of the states. Clinical testing was thought more important than theories. The present medical system built up in the end of the eighteenth century.
